The Eurozone crisis and the age of austerity, as well as challenges to the environment as a result of economic growth have highlighted the need for a greater understanding of those facets of economics that are of most use to businesses and their decision makers. This book introduces all of the relevant theoretical aspects of the subject and applies them to real-life examples of economics that are of particular interest to students today, including: the impact of globalization; the way in which 'green' perspectives can be built into decision making and how the financial crisis has challenged economists, politicians and business people to rethink their existing ideas. Replete with illuminating case studies, and benefitting from features such as activities, review questions and further reading, Business Economics introduces the theory and practice of economics for non-specialist students new to the topic.

From the Foreword: "This book was designed to provide and encourage practitioner s development and use of critical drug information evaluation skills through a deeper understanding of the foundational principles of study design and statistical methods. Because guidance on how a study s limited findings should not be used is rare, practitioners must understand and evaluate for themselves the veracity and implications of the inherently limited primary literature findings they use as sources of drug information to make evidence-based decisions together with their patients. The editors organized the book into three supporting sections to meet their pedagogical goals and address practitioners needs in translating research into practice. Thanks to the editors, authors, and content of this book, you can now be more prepared than ever before for translating research into practice." L. Douglas Ried, PhD, FAPhA Editor-in-Chief Emeritus, Journal of the American Pharmacists Association Professor and Associate Dean for Academic Affairs, College of Pharmacy, University of Texas at Tyler, Tyler, Texas"
