This book is the first practical manual describing a new and successful short-term treatment for traumatic stress and PTSD called Narrative Exposure Therapy (NET). The manual provides both experienced clinicians and trainees with all the knowledge and skills needed to treat trauma survivors using this approach, which is especially useful in crisis regions where longer-term interventions are not possible. NET has proved successful in projects in areas such as Kosova, Sri Lanka, Uganda, and Nigeria, as well as in controlled trials in Gainesville, FL and Louvain, Belgium. Three to six sessions can be sufficient to afford considerable relief. therapeutic approach in detail, with practical advice and tools. Part III then focuses on special issues such as dealing with challenging moments during therapy, defense mechanisms for the therapist, and ethical issues. A series of appendices include further practical aides such as a handout on depression, a drug-dependency questionnaire, and an informed consent form. A practical manual describing a new and successful short-term intervention for stress disorders.

This book provides an overview of theoretical, empirical, and clinical conceptualizations of mental health following exposure to human rights violations (HRV). There are currently hundreds of millions of individuals affected by war and conflict across the globe, and over 68 million people who are forcibly displaced. The field of refugee and post-conflict mental health is growing exponentially, as researchers investigate the factors that impact on psychological disorders in these populations, and design and evaluate new treatments to reduce psychological distress. This volume will be a substantial contribution to the literature on mental health in refugee and post-conflict populations, as it details the state of the evidence regarding the mental health of war survivors living in areas of former conflict as well as refugees and asylum-seekers.

This book offers an evidence based guide for clinical psychologists, psychiatrists, psychotherapists and other clinicians working with trauma survivors in various settings. It provides easily digestible, up-to-date information on the basic principles of traumatic stress research and practice, including psychological and sociological theories as well as epidemiological, psychopathological, and neurobiological findings. However, as therapists are primarily interested in how to best treat their traumatized patients, the core focus of the book is on evidence based psychological treatments for trauma-related mental disorders. Importantly, the full range of trauma and stress related disorders is covered, including Acute Stress Reaction, Complex PTSD and Prolonged Grief Disorder, reflecting important anticipated developments in diagnostic classification. Each of the treatment chapters begins with a short summary of the theoretical underpinnings of the approach, presents a case illustrating the treatment protocol, addresses special challenges typically encountered in implementing this treatment, and ends with an overview of related outcomes and other research findings. Additional chapters are devoted to the treatment of comorbidities, special populations and special treatment modalities and to pharmacological treatments for trauma-related disorders. The book concludes by addressing the fundamental question of how to treat whom, and when.

This treatment manual provides mental health professionals with instructions for conducting written exposure therapy, a brief and accessible trauma intervention that is effective at reducing PTSD symptoms.

This handbook presents the current evidence-based psychological treatments for trauma related disorders in childhood and adolescence and in addition provides clearly structured, up-to-date information on the basic principles of traumatic stress research and practice in that age group, covering epidemiology, developmental issues, pathogenetic models, diagnostics, and assessment. Each of the chapters on treatment, which form the core of the book, begins with a summary of the theoretical underpinnings of the approach, followed by a case presentation illustrating the treatment protocol session by session, an analysis of special challenges typically encountered in implementing this treatment, and an overview of the current evidence base for the treatment approach. A special section considers modern treatments in particular settings, such as schools, hospitals, and juvenile justice systems, and the concluding chapters provide an integrative discussion on how to treat traumatized children and adolescents and an outlook. The book will be invaluable for clinical child and adolescent psychologists, child and adolescent psychiatrists, psychotherapists, and other mental health professionals working with traumatized children and adolescents.

The authoritative presentation of Eye Movement Desensitization and Reprocessing (EMDR) therapy, this groundbreaking book--now revised and expanded--has enhanced the clinical repertoires of more than 125,000 readers and has been translated into 10 languages. Originally developed for treatment of posttraumatic stress disorder (PTSD), this evidence-based approach is now also used to treat adults and children with complex trauma, anxiety disorders, depression, addictive behavior problems, and other clinical problems. EMDR originator Francine Shapiro reviews the therapy's theoretical and empirical underpinnings, details the eight phases of treatment, and provides training materials and resources. Vivid vignettes, transcripts, and reproducible forms are included. Purchasers get access to a Web page where they can download and print the reproducible materials in a convenient 8 1/2" x 11" size. New to This Edition \*Over 15 years of important advances in therapy and research, including findings from clinical and neurophysiological studies. \*New and revised protocols and procedures. \*Discusses additional applications, including the treatment of complex trauma, addictions, pain, depression, and moral injury, as well as post-disaster response. \*Appendices with session transcripts, clinical aids, and tools for assessing treatment fidelity and outcomes. EMDR therapy is recognized as a best practice for the treatment of PTSD by the U.S. Departments of Veterans Affairs and Defense, the International Society for Traumatic Stress Studies, the World Health Organization, the U.K. National Institute for Health and Care Excellence (NICE), the Australian National Health and Medical Research Council, the Association of the Scientific Medical Societies in Germany, and other health care associations/institutes around the world.

Prolonged Exposure Therapy is an effective, highly flexible, and very well researched intervention to reduce the symptoms of PTSD across a variety of traumatized populations. The second edition of Prolonged Exposure Therapy for PTSD: Emotional Processing of Traumatic Experiences, Therapist Guide, along with the accompanying Workbook, provides all of the tools necessary for trained mental health providers to implement this first-line PTSD treatment with their patients. This model is individualized to address the needs of a variety of trauma survivors. Leaders in clinical practice, training, and research in the field of PTSD treatment, the authors have revised the Guide throughout to reflect the many advances in PTSD research that have occurred since the release of the first edition, including key adjustments to the underlying theory as well as additional evidence for modifications and individualization for more complex patient presentations and military populations. The Guide provides a concise but thorough description of the key components of the program, how to implement them, and when and how to consider adaptations.
